

CERAMICX
NANO CERAMIC ULTRA - BESCHICHTUNG

**THE GLOBAL
LEADER IN
COATING
SOLUTIONS**

HERE ARE THE PROBLEMS

Every vehicle, from small cars to supercars and luxury saloons, are exposed to harsh weather conditions, damaging cleaning chemicals and wear and tear. Maintenance is costly and a time consuming, highly demanding element of vehicle ownership.

FOULING

Build-up of road dirt, insects, bird droppings and other contaminants can be a tedious and labor intensive task to remove. Often harsh chemicals and back breaking techniques are required to remove these types of growth.

CORROSION

The environment will gradually degrade any exposed surfaces on your vehicle causing damage and unsightly appearance.

UV DAMAGE

UV rays are highly damaging and can be one of the leading causes to accelerated aging of your vinyl, paint, gelcoat etc. UV exposure will make your vehicle look neglected and aged.

HARSH CHEMICALS

Cleaning using strong chemicals has a direct effect on the environment. Often times these chemicals find their way into our water system disrupting the natural cycle of sea life and the environment.

HARSH CHEMICALS

Cleaning using strong chemicals has a direct effect on the environment. Often times these chemicals find their way into our water system disrupting the natural cycle of sea life and the environment.

EXCESSIVE CLEANING

Scrubbing, rinsing and drying a vehicle is very labor intensive and costs the vehicle owner both valuable time and money.

HERE'S THE SOLUTION

CeramicX

Developed and manufactured in leading edge facilities by highly skilled technicians, the CeramicX range has revolutionised the automotive industry with features unparalleled by any other product.

10H HARDNESS

Tested and proven to be 10H in hardness, the coating is the strongest and most durable on the market.

EXTREME GLOSS

CeramicX visually enhances the vehicle's surface by adding deep gloss and shine.

STRONG DURABILITY

CeramicX 10H can be applied in multiple layers, increasing the durability of the protective coat.

SELF-CLEANING

The coating's protective layer allows dirt and contaminants to be easily washed off without harsh chemicals.

UV RESISTANCE

Without UV inhibiting properties the entire vehicle is protected against the sun's harsh rays, keeping it looking new.

THE GLOBAL LEADER IN COATING SOLUTIONS

CeramicX is a clear, liquid, nano ceramic coating, based on cutting edge technology. When cured, this technology will chemically bond, transforming itself on the surface to become a rigid, super-structure of nanoglass, protecting the substrate it is applied to indefinitely. CeramicX was designed as an industrial, multi-functional, protective coating for all surfaces. The nano-ceramic glass coating forms an exceptionally strong and durable shield, resistant to solvents, acids, alkalis, UV rays, harsh weather conditions and corrosion.

WHY CERAMICX ON MY VEHICLE

GOOD INVESTMENT

The coating will permanently protect the vehicle's exterior and interior from deteriorating. The resale market value of your car will be higher as not only will the coating have tangible benefits for the new owner but the warranty is transferable too.

LOOKING NEW ALL THE TIME

Once the coating is applied you will see ultimate gloss and colour depth, incomparable with anything else. Properly maintained, the vehicle's finish will shine for many years to come.

LESS MAINTENANCE

The slickness of the coated surface does not allow dirt, brake dust and tar to stick to your car's paint, wheels or glass. The coating is so slick and resistant to chemicals that contaminants can be removed with less aggressive and damaging wash methods. Washing the vehicle becomes less labour intensive and needed less frequently. Waxing is now obsolete.

HOW THE **MAGIC** HAPPENS

PRESERVATION OF ORIGINAL FACTORY PAINT

Once cured, CeramicX is measured to have a hardness above 10H. Normal clear coat has a hardness between 2H and 4H. The glass shield prevents minor scratches to your clear-coat and acts as a sacrificial layer. Any scratches to the coating are easily removed, without compromising the integrity of the original clear coat, with light polishing.

With CeramicX the paint will not fade or age due to the UV and anti-oxidation protection.

GLOSS, SLICK AND SELF CLEANING

The complex nano-technology used in the CeramicX product range, allows the ceramic nanoparticles to fill the smallest pores in the paint making the coated surface shiny, smooth and extremely slick or hydrophobic.

CeramicX dramatically lowers the surface tension preventing environmental contaminants such as bird droppings, insects, dirt, tar and graffiti paint from bonding to the surface.

Water easily removes dirt from the surface by encapsulating it into water beads that roll off the surface. This is called the self cleaning effect.

PERMANENT PROTECTION

CeramicX 10H is a one-time application if maintained correctly. Once the CeramicX glass shield has cured it can only be removed through abrasion, like wet sanding. This puts CeramicX in a category by itself, compared to sealants or waxes that degrade quickly with normal washing and can easily be stripped away with mild chemicals.

PERMANENTLY PROTECTS THE VEHICLE'S PAINT AND RIMS AFTER **ONE APPLICATION**

THE GLOBAL LEADER IN COATING SOLUTIONS

CeramicX 10H

CeramicX 10H is the highest rated Ceramic Coating available in the World Today tested above 10H+ hardness. Developed and engineered originally for the motorsport industry in Germany this coating has only recently become available to the rest of Europe and the professional detailing industry. Quite simply it is an unrivaled nano glass coating with a lifetime warranty*

CeramicX Wheel X

CeramicX WheelX is an unrivaled ceramic coating for all wheel types, from paint, powder coated, diamond cut, polished, and chrome. Suitable for wheels, this coating ensures your vehicle's metallic parts are sealed and protected ensuring long life protection from nature's harsh abrasions and weather conditions.

CeramicX Glass X

CeramicX GlassX is a nano glass coating and sealant for your vehicles windows and exterior mirrors. It provides a super clear coating to ensure that rain water and dirt is repelled by its hydrophobic properties and offering additional protection from stone chips and debris.

CeramicX Leather X

CeramicX LeatherX provides super interior protection and stain guard for your vehicle's leather seats, door cards, dash panels and any other leather interior covering. CeramicX LeatherX will provide and seal in your interiors leather qualities and repel against UV and liquid damage.

CeramicX Fabric X

CeramicX FabricX provides super interior protection and stain guard for your vehicle's fabric seats, doors card, dash panels and any other fabric interior covering. CeramicX FabricX will provide and seal in your interior's fabric qualities and repel against UV and liquid damage.

CeramicX Plastics X

CeramicX PlasticsX provides super interior protection and stain guard for your vehicles' interior plastics, instrument clusters, dash panels. CeramicX PlasticsX will provide and seal in your interiors' plastic qualities and repel against UV and liquid damage.

CeramicX Metal X

CeramicX MetalX is an unrivaled ceramic coating for all metal types, from paint, powder coated, diamond cut, polished, and chrome. Suitable for brake calipers, exhausts, side steps, window surrounds and grilles this coating ensures your vehicles metallic parts are sealed and protected ensuring long life protection from nature's harsh abrasions and weather conditions.
